

INVESTIGATORS CAN NOW SEARCH THROUGH  
DIGITAL EVIDENCE THEMSELVES

## Tracks Inspector

The volume of digital information involved in criminal investigation has risen dramatically in recent years. Right from the start of an investigation the detective closely involved with the case needs to be able to evaluate the relevance of his information, and must know the facts.

Fox-IT has developed a solution in which digital evidence is stored centrally while tactical investigators can use web browsers simultaneously to study this evidence quickly, easily and at an early stage. This solution is called the Tracks Inspector.

INSPECTOR**  
BY FOX IT

### Key features

- Developed for collaboration among investigative teams
- Investigation of evidence material while a forensic copy is made
- Use via a web browser, no need for extra plug-ins
- Use on the move - Tracks Inspector works perfectly on Android tablets or iPads
- Users without IT experience can get to work after just one day's training
  
- Tracks Inspector is supplied as an appliance solution
- Tactical information in dashboards enables a strategic approach
- Interactive and intuitive searching using smart filters
- Practical reporting feature
- User interface in multiple languages
- Easy to expand for quicker operation, more storage and more users

### Analysing digital evidence becomes easier

Viewing electronic information becomes just as easy as reading an impounded paper diary, for instance, or a file with invoices. Investigators need standard reports which can easily be included in a charge. Tracks Inspector makes this possible.

### Tactical investigator conducts own digital research

After one day of training a tactical investigator is able to study the digital evidence in a case himself using Tracks Inspector. No IT experience is needed.

### Simplicity

Tracks Inspector is a system characterised by simplicity, security, collaboration, reporting, linking with other systems and scalability in terms of storage, processing, management and analysis. Tracks Inspector enables the tactical investigator to analyse case information with colleagues anytime and anywhere. Analyses are immediately shared and results can be reported on paper or in digital form.

### Collaboration

The tactical investigator is able to locate the digital information within the context of the case himself. This gives the scarce forensic IT experts the opportunity to focus on specialist issues. Their knowledge and advanced forensic IT tools can thus be put to better use.

### Use

Tracks Inspector is supplied as an appliance which can easily be expanded thanks to its scalable architecture. The system can thus grow in line with the organisation's needs. The user interface is accessible through a web browser without being dependent on extra plug-ins. Tracks Inspector works not only in all popular internet browsers, but can also be used perfectly with an Android tablet or iPad thanks to the use of HTML5 technologies.

### Operation

After registering the investigator selects a case, for which a dashboard is then displayed. This dashboard is a visual representation of digital evidence such as hard-drives, USB sticks, DVDs etc. The dashboard will automatically indicate which items of evidence may be interconnected, what users have been created, and will notify the presence of suspicious programmes or files such as encryption. This information can be used to determine the sequence of the investigation and to assess whether the assistance of a forensic IT expert is needed. Clicking on an item of evidence gives the investigator an overview of the available images, documents, videos, e-mail and possibly the internet history. The investigator can search through the data and filter to find relevant material which can be marked and described.
